

WAX COMPARISON CHECKLIST EXPLAINED

This checklist is a guide SPECIFICALLY for your wax products. Prepping the skin, laying proper strips and pulling properly are **NOT** included in this checklist (please refer to the waxing skills checklist). Those skills are also extremely important while testing new waxes.

TEMPERATURE & WAX CONSISTENCY

- Did you follow the wax instructions for consistency and temperature melting point?
- Did the wax melt evenly and quickly when adding new wax?

APPLICATION & EASE OF USE

- Did the wax come off the stick well or did it feel like you wasted wax?
- How did the wax spread? smoothly, chunky, thick?

DRYING TIME & FLEXIBILITY

- Did the wax set up quickly or take a long time to dry?
- Did the wax dry evenly (assuming the wax was laid evenly)
- Was the wax flexible or did it break easily while pulling?

AMOUNT OF HAIR REMOVED

- Did the wax remove all the course hair?
- Did the wax remove all the vellus hair?
- Did the wax break the hair?

STATE OF SKIN AFTER WAXED

- Did the skin look irritated after waxed?
- Was there ingredients that clients might be allergic to?

As a professional wax specialist, your primary product is your wax. Despite its occasional inconsistencies, your wax's quality depends on how well you prepare and maintain it, as well as your wax pot throughout the day. I have found that wax consistency is more important than the temperature.

WAX COMPARISON CHECKLIST

How effective is your wax Product?
Experiment with different waxes and find the
best fit for your climate, clients, and you.

Company: _____ Wax Product: _____ Wax Cost: _____	
Categories	Score
Temperature & Wax Consistency	____ out of 5
Application/Ease of Use	____ out of 5
Drying Time/Flexibility	____ out of 5
Amount of Hair Removed	____ out of 5
State of Skin after waxed	____ out of 5
Score out of 25	____ out of 25
